

Paris, June 21st, 2018

Inserm Transfert and CNRS Innovation will be exhibiting together at MedFIT 2018

Inserm Transfert and CNRS Innovation will be exhibiting together at the second edition of MedFIT, the European business convention dedicated to innovation partnerships and the main marketplace for early-stage investment in medical and diagnostic technologies, from June 26th to 27th 2018 in Strasbourg.

For the second edition of MedFIT, Inserm Transfert and CNRS Innovation will participate and exhibit together in booth A6 and B6, near the BtoB meeting booths. They will each present their technology transfer activities. Following the master agreement signed between Inserm and CNRS on October 23rd, 2017, this joint participation is intended to « foster a bigger concertation about their politic and scientific strategies, at regional, national as well as European levels » and to « promote common interdisciplinary actions based on areas beyond life sciences ».

About Inserm Transfert SA

Inserm is the French National academic Institute of Health and Medical Research.

Inserm Transfert, founded in 2000, is the private technology transfer subsidiary of Inserm.

Inserm delegated to Inserm Transfert the management of its technology transfer activities including the negotiation and signature of research, collaborative, license, service and non-disclosure agreements relating to the research conducted solely or jointly by Inserm's research units.

Inserm Transfert is dedicated to technology transfer from scouting of invention disclosure to industrial partnership.

Inserm Transfert manages National, European and International research projects, assists large-scale projects in epidemiology, cohorts, and public health.

Inserm Transfert runs a proof of concept fund for Inserm's research units.

In 2005, the company created a seed fund, Inserm Transfert Initiative, to support entrepreneurs in the biotechnologies sector.

A propos de CNRS Innovation

CNRS Innovation créée en 1992, est une société anonyme, filiale du CNRS à 70% et de BPI France à 30%. CNRS Innovation a pour mission le transfert vers l'industrie de technologies innovantes issues des laboratoires liés au CNRS. Elle assure l'évaluation des technologies, établit les stratégies de protection, porte la gestion du portefeuille de brevets et leur transfert vers les entreprises par la négociation et le suivi des contrats d'exploitation. CNRS Innovation développe également une forte expertise de cartographie des domaines d'innovation, de positionnement des technologies et d'accompagnement des créateurs de start-up.
