PRESS RELEASE

Besançon, France – November 2026

TEMIS Santé: A Strategic Gateway for HealthTech Innovation and Business Development in France

From proof of concept to clinical development and biomanufacturing, TEMIS Santé connects scientific excellence, industrial expertise and business opportunities within an integrated HealthTech ecosystem.

Besançon, France – TEMIS Technopole, supported by Grand Besançon Métropole, is strengthening its international positioning as a destination for biotechnology, medical technology and advanced therapy companies seeking to develop, collaborate and establish operations in Europe.

Located in eastern France, close to Switzerland, TEMIS Santé Life Science Park brings together academic research, clinical expertise, technological platforms and industrial capabilities within a collaborative environment designed to accelerate healthcare innovation.

Connecting science, clinical development and industry

TEMIS Santé benefits from a distinctive combination of life sciences and engineering expertise, supported by leading regional stakeholders including the University, Besançon University Hospital (CHU), the French Blood Establishment (EFS), INSERM research teams, FEMTO-ST and the PMT competitiveness cluster.

At the heart of this ecosystem, **BioInnovation** provides dedicated laboratories, office space, technological resources and access to scientific, clinical and industrial expertise.

The ecosystem supports companies across the innovation value chain, from early-stage research and proof of concept to preclinical and clinical development, technology transfer and biomanufacturing.

Its key areas of expertise include:

- **Biotherapies and advanced therapies:** cell and gene therapies, immunotherapies and innovative biological medicines.

- **Bioproduction:** process development, technology transfer and access to GMP manufacturing expertise.
- **MedTech and diagnostics:** medical devices, microtechnologies, biomedical engineering and industrial development.

A growing destination for HealthTech companies

To accelerate business development and attract innovative companies, TEMIS Santé is expanding its infrastructure and strengthening its business support services.

The BioInnovation ecosystem offers tailored solutions for startups, SMEs and international companies, combining access to facilities, technological expertise, academic and industrial partners, and opportunities for collaborative development.

New initiatives aim to facilitate company establishment, accelerate early-stage development and connect innovative projects with financing and industrial partners.

The ambition is clear: to make Besançon a preferred location for companies developing the next generation of medical technologies and biological therapies.

Building international partnerships

TEMIS Santé is actively developing connections with European and international HealthTech ecosystems to encourage cross-border collaborations, technology transfer, industrial partnerships and business investment.

Through its participation in major international partnering events, including BioFIT and MedFIT 2026 in Marseille, TEMIS Technopole invites biotech, medtech, CDMO, technology providers and investors to explore collaboration and business development opportunities in Besançon.

Looking for a European location to develop your HealthTech innovation? Let's connect at BioFIT & MedFIT 2026!

About TEMIS Technopole

Located in Besançon, France, TEMIS Technopole supports innovation, entrepreneurship and industrial development by connecting research, technology and business. Its TEMIS Santé Life Science Park specialises in biotherapies, bioproduction, medical devices and healthcare innovation, offering companies access to a multidisciplinary ecosystem, dedicated infrastructure and strategic partnerships.
